BAUER
Experience for you!

“100 years of drilling, 4 decades of building machines, and still down to the earth”  Prof. Thomas Bauer

We could start by telling you about Sebastian Bauer, who founded a copper forge in the German town of Schrobenhausen some 200 years ago. We could then move on to how his workshop prospered and developed to a leading construction company for specialist foundation engineering. The story would continue to the mid 20th century, when innovation and the drive for perfection prompted Bauer to develop and build their own high-quality and high-performance machinery.

And it still wouldn’t end in the 21st century, Bauer now family-run in the seventh generation and meanwhile a globally operating group with more than 100 branches and subsidiaries operating in the fields of special foundation engineering (Bauer Spezialtiefbau), in manufacturing of foundation equipment (Bauer Maschinen) and focusing on products and services in the fields of water, energy, mineral resources and environmental technology (Bauer Resources).

But we think what really matters about us and to our customers is this: We are a strong partner with face and values, we are down to earth, and we are dedicated to perfection in everything we touch.

1790 Foundation as a copper forge in Schrobenhausen, Germany
1928 Well drilling in Bavaria, Germany
1958 Invention of the ground anchor by Dr.-Ing. K.H. Bauer
1976 First hydraulic rotary drill rig BAUER BG 7
1984 First diaphragm wall trench cutter BC 30
More than machines: Competent consulting

Quality is not an act, it is a habit.

Of the thousands of machines Bauer Maschinen has built since production started in the 1970’s with the first rotary drill rig BG 7, many of them are still in operation all over the world – in Siberia as well as in the desert. State of the art technology developed end-to-end by our inhouse engineers and full machine tests prior to delivery are one side of the coin. Bauer Maschinen can serve any customer need with the most comprehensive product portfolio.

The other side is project-specific consulting by highly trained experts, with a focus on your special requirements.

- Quality and experience in specialist foundation engineering
- Global operation – local contacts in over 70 countries
- Reliability in technology, service
- Customized solutions
- On-site support over entire machine service life
The BAUER BG PremiumLine

The BG Premium Line stands for multifunction equipment for a variety of foundation construction systems. The selection between two model ranges allows an optimum choice for differing project or transportation requirements.

Specific highlights of the BG PremiumLine are:
- High safety standards
- Environmental sustainability, economic efficiency and performance
- Easy to transport and short rigging time
- High quality standard
- Long lifetime and excellent resale value

Special features of the H-model line are:
- Fast loading onto transport vehicles
- Easy rigging on-site due to compact design
- Rapid shifting to new working positions on construction sites with underpasses or underneath low bridges

Special features of the V-model line are:
- Big borehole diameters
- Large drilling depths
- Extended service intervals and power transmission with low vibrations due to the robust design of the kinematic system
The Rotary Drilling Rig
BG 28 H PremiumLine (BT 85)

Max. drilling diameter: 2,500 mm
Max. drilling depth: 68.4 m
Max. torque: 300 kNm
Max. height: 27.4 m
Engine: CAT C 13 – Stage III A/Tier 3
– Stage IV/Tier 4 final
354 kW @ 1,850 rpm

1 Undercarriage
2 Upper carriage
3 Main winch
4 Auxiliary winch
5 Crowd winch
6 Kinematic system
7 Mast
8 Mast head
9 Kelly bar
10 Rotary drive (KDK)
11 Drilling tool

BG 24 H BT 75 / BT 85
BG 28 H BT 85
BG 36 H BS 95
BG 55 BS 115
BG 72 BT 180
Modern, ergonomic operator cab
- FOPS compliant with additional protective roof guard
- Premium operator seat, air-sprung and heatable
- Joystick controls with high functionality

Flexible mast concept
- Upper mast extension 2 m (hydraulically foldable and lockable)
  - Simple and secure attachment, no working at heights unsecured
  - Reduced transport length
- Lattice mast extension (optional)

Powerful engine CAT C 13
- Conforming Exhaust Emission standard Stage III A / Tier 3 or Stage IV / Tier 4 final
- Diesel particulate filter in Exhaust Emission standard Stage IV / Tier 4 final
- Low noise emission
- Worldwide CAT-service partners

Spotlights
- Reduction of fuel consumption by up to 30 %
- Increased productivity through improved efficiency
- Significantly reduced noise levels
- Tried and proven suitability for practical application
- Optimized parallel operation of main and auxiliary consumers
Variable stackable counterweight elements
- Constant tail radius (irrespective of number of counterweights)
- Low weight of individual elements (4.9 t or 2.5 t)
- Flexible arrangement for various applications
- Mounting and demounting possible with the drilling rig
- Transport of the machine possible without removing counterweights

Safety equipment
- Integrated service platforms in the upper carriage for easy and safe maintenance work
- Retractable grating on side of cab
- Guardrails on the upper level (foldable for transport)
- 2 rear view cameras

Remote control for rigging the machine
- The remote control can be used to perform numerous rigging functions outside the danger zone, such as moving the drilling rig, telescopig the undercarriage, etc.
  - Operation within sight of the controlled rigging functions
  - Rugged and compact wireless remote control Multi with LCD screen
  - Lockable storage box for the remote control can be accessed from the ground
**Rotary Drive**

Rotary drive KDK 300
- Optional single gear drive KDK 300 K or multi gear drive KDK 300 S
- Max. torque 300 kNm
- Max. speed 50 rpm

**Hydraulically operated pin connection on the crowd sledge**
- Pin connection controlled via the remote control
- Simple and secure attachment of the rotary drive, no working at heights unsecured

**KDK 300 K**

- Additional torque casing
- 1st gear

**KDK 300 S**

- Additional torque casing
- 1st gear
- 2nd gear

</table>

---

C

D

E
**B-Tronic**
The BAUER B-Tronic system allows completion of construction tasks in a reliable and accurate manner, even under extreme operating conditions:
- The high-resolution touchscreen display ensures excellent user-friendliness
- The display can be optimally adapted to the operating situation and the amount of light present by changing the brightness level, the color scheme and the day/night mode
- The main parameters such as pump pressure, torque and drilling depths can be viewed at a glance

**Device networking**

**DTR module**
- The DTR module allows equipment and production data to be made available to a wide variety of users

**WEB-BGM**
- WEB-BGM is a software used to retrieve equipment data and establish the locations of various machines, even if you are not on-site

**B-Report**
- Standardized reports for the documentation of drilling progress and verification of performance and quality

**Tablet**
The tablet is the multi-functional tool for the Bauer machine:
- Online access to the customer portal, handbooks, equipment management systems and much more
- Standard internet connection via the DTR module, which is located in the machine
- The operator’s screen can be mirrored live on the tablet to track the operating process
Assistance Systems (selection)

One-directional and bi-directional spoil discharge assistant
Automatic emptying of spoil via an alternating or shocking slewing rotation of the rotary drive. Infinitely variable adjustment of the shaking or shocking frequency via joystick.

Automatic drilling and extraction control for Single-Pass processes
The system controls the drilling and/or extraction speed of the crowd system and enables hands-free operation. This ensures the production of a high-quality pile while simultaneously minimizing the amount of concrete.

Kelly drilling assistant
Saves the current crowd speed and the speed of the rotary drive. It enhances drilling performance with simultaneous hands-free operation. Drilling parameters can be adjusted during the automated drilling procedure.

Kelly visualization
Display of the locking recesses, as well as representation of the controlled extension and retraction of the Kelly bar on the B-Tronic system. The rapid approach of the locking position results in a considerably enhanced drilling performance. In addition, the level of wear that the Kelly bar and drive keys are subject to is significantly reduced.

Satellite-based positioning
The BAUER-Assistant Positioning System (B-APS) allows the position of a bored pile to be located extremely accurately. Documentation is provided for the nominal and actual coordinates, as well as the corresponding accuracy of each bored pile. Manual marking of the piles is no longer required.

Numerous other assistance systems are available in our portfolio

Highlights of the equipment package - displacement piling FDP Lost-bit special:

- Special mast head with auxiliary rope boom, which can be swivelled hydraulically in the drill axis
- Mast-guided passenger hoist system with swivelling transport platform
- Concrete funnel with camera system and cleaning system on the rotary drive for depressurized concreting in FDP mode
- High-pressure cleaner with water tank integrated in the base carrier
- Hydraulic upper carriage support for stabilizing and lifting the machine
- Extra wide flat track shoes on the undercarriage
- Advanced EEP hydraulic system for full parallel operation of drilling and auxiliary functions
- Large horizontal movement enables a smooth and trouble-free swivel motion

Operating weight (as shown) 86.4 t

Transport Data – Dimensions and Weights

G = Weight (t)
B = Width (mm)

Weights shown are approximate values; optional equipment may change the overall weight and dimensions.

**Transport with standard mast**

G = 67.2 t

**Transport with standard mast and 2 m mast extension**

G = 84.8 t

Base carrier with UW 80

Base carrier with UW 100

**Counterweight ***

Weight = 2.5 / 4.9 t
Width = 3,000 mm

* depending on application

**Rotary drive**

Weight = 5.2 t (KDK 300 K)
5.5 t (KDK 300 S)
